

SEGA EUROPE PUTS A NEW TILT ON VIRTUA TENNIS 3

Adding a whole new dimension to the way you play tennis, Virtua Tennis 3 is to fully support the PS3 controller tilt function.

By selecting motion sensor from the wireless controller configurations, you can move your player simply by tilting the pad in a particular direction. Tilt the controller forwards and your player moves forward, tilt it back and they will move back, tilt left to move them left, tilt the controller to the right and... you guessed it, your player moves to the right!

You can also serve up aces and play a number of hard hitting tennis shots by using the controller in a similar way to a tennis racquet, and without using the buttons or analogue sticks:

Swing the controller up quickly - Player makes a lob shot

Swing the controller down quickly - Player performs a slice shot

Swing the controller horizontally - Top spin!
